

## Accessibility Remediation

### Overview

Companies across the country are at risk of legal action as the number of website accessibility lawsuits spikes. **Law firms are aggressively pursuing businesses** that break basic accessibility rules on their website. Automated website checking software is used to identify websites that are candidates for settlement demands and ultimately, litigation.

Imaginary Landscape has created a specialized initiative to help companies quickly and cost effectively minimize accessibility failure rates.

### Process

- **Analyze your website.** Utilizing several accessibility testing tools, we run your website through the tests, identifying structural weaknesses and providing you a detailed report.
- **Fix the problems.** Based on our findings, we will recommend and implement structural updates to minimize automated testing failure rate.
- **Retest the website.** We run the website through the same testing routine to ensure the fixes have the desired effect.
- **Provide ongoing guidance.** Imaginary provides a special “Accessibility Cheat Sheet” to your web staff so all future website updates will comply with accessibility standards.

### Get Started

Contact Imaginary Landscape toll free at (877) 275-9144 or [imagescape.com](http://imagescape.com) to discuss your specific situation.
